Generating Man Pages For Your Own cobra.Command

Generating man pages from a cobra command is incredibly easy. An example is as follows:

```go
package main

import (
    "log"

    "github.com/spf13/cobra"
    "github.com/spf13/cobra/doc"
)

func main() {
    cmd := &cobra.Command{
        Use:   "test",
        Short: "my test program",
    }
    header := &doc.GenManHeader{
        Title: "MINE",
        Section: "3",
    }
    err := doc.GenManTree(cmd, header, "/tmp")
    if err != nil {
        log.Fatal(err)
    }
}
```

That will get you a man page **/tmp/test.3**
