Example app with [chakra-ui](#)

This example features how to use [chakra-ui](#) as the component library within a Next.js app.

We are connecting the Next.js `_app.js` with `chakra-ui` 's Theme and ColorMode containers so the pages can have app-wide dark/light mode. We are also creating some components which shows the usage of `chakra-ui` 's style props.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

▲ Deploy

How to use

Execute [`create-next-app`](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-chakra-ui with-chakra-ui-app
# or
yarn create next-app --example with-chakra-ui with-chakra-ui-app
# or
pnpm create next-app -- --example with-chakra-ui with-chakra-ui-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).

Notes

Chakra has supported Gradients and RTL in `v1.1` . To utilize RTL, [add RTL direction and swap](#).

If you don't have multi-direction app, you should make `<Html lang="ar" dir="rtl">` inside `_document.js` .
