☐ Windows
☐ macOS
☐ Linux

Complexity: 2

Instructions * make sure you are on a node.js version that is compatible with building VSCode * download insiders and stable builds of VSCode matching your platform * clone `vscode` to a local folder * `yarn && yarn compile` * `yarn --cwd test/smoke` * `node build/lib/preLaunch.js` * `yarn smoketest --build <path to latest version> --stable-build <path to stable version>`

If the automated tests fail, create and issue for that and run the tests manually: https://github.com/microsoft/vscode/wiki/Smoke-Test
