getStaticProps/getServerSideProps can not be attached to the page component

Why This Error Occurred   On one of your page's components you attached either `getStaticProps`, `getStaticPaths`, or `getServerSideProps` as a member instead of as a separate export.

These methods can not be attached in the same way as `getInitialProps` and must be their own export

Possible Ways to Fix It   Move the method to it's own export from your page.

Before

```
function Page(props) {
  return <p>hello world</p>
}

Page.getStaticProps = () => ({
  props: {
    hello: 'world',
  },
})

export default Page
```

After

```
function Page(props) {
  return <p>hello world</p>
}

export default Page

export const getStaticProps = () => ({
  props: {
    hello: 'world',
  },
})
```
