Thank You

First off, thanks for contributing to the maintenance of the Python programming language and the CPython interpreter! Even if your contribution is not ultimately accepted, the fact you put time and effort into helping out is greatly appreciated.

Contribution Guidelines

Please read the [devguide](#) for guidance on how to contribute to this project. The documentation covers everything from how to build the code to submitting a pull request. There are also suggestions on how you can most effectively help the project.

Please be aware that our workflow does deviate slightly from the typical GitHub project. Details on how to properly submit a pull request are covered in [Lifecycle of a Pull Request](#). We utilize various bots and status checks to help with this, so do follow the comments they leave and their "Details" links, respectively. The key points of our workflow that are not covered by a bot or status check are:

- All discussions that are not directly related to the code in the pull request should happen on bugs.python.org
- Upon your first non-trivial pull request (which includes documentation changes), feel free to add yourself to `Misc/ACKS`

Setting Expectations

Due to the fact that this project is entirely volunteer-run (i.e. no one is paid to work on Python full-time), we unfortunately can make no guarantees as to if or when a core developer will get around to reviewing your pull request. If no core developer has done a review or responded to changes made because of a "changes requested" review, please feel free to email python-dev to ask if someone could take a look at your pull request.

Code of Conduct

All interactions for this project are covered by the [PSF Code of Conduct](#). Everyone is expected to be open, considerate, and

respectful of others no matter their position within the project.
