Frame.tap() method

This method fetches an element with `selector`, scrolls it into view if needed, and then uses Page.touchscreen to tap in the center of the element.

Signature:

```
tap(selector: string): Promise<void>;
```

Parameters

Parameter	Type	Description
selector	string	the selector to tap.

Returns:

Promise<void>

a promise that resolves when the element has been tapped.

Remarks

If there's no element matching `selector`, the method throws an error.
