Synopsis

```
npm star [<pkg>...]
```

Note: This command is unaware of workspaces.

Description

"Starring" a package means that you have some interest in it. It's a vaguely positive way to show that you care.

It's a boolean thing. Starring repeatedly has no additional effect.

More

There's also these extra commands to help you manage your favorite packages:

Unstar

You can also "unstar" a package using `npm unstar`

"Unstarring" is the same thing, but in reverse.

Listing stars

You can see all your starred packages using `npm stars`

Configuration

`registry`

- Default: "https://registry.npmjs.org/"
- Type: URL

The base URL of the npm registry.

`unicode`

- Default: false on windows, true on mac/unix systems with a unicode locale, as defined by the `LC_ALL`, `LC_CTYPE`, or `LANG` environment variables.
- Type: Boolean

When set to true, npm uses unicode characters in the tree output. When false, it uses ascii characters instead of unicode glyphs.
