# Using a custom Babel config

This example features:

- An app using proposed [do expressions](#).
- It uses babel-preset-stage-0, which allows us to use above JavaScript feature.
- It uses '.babelrc' file in the app directory to add above preset.

> *Most of the time, when writing a custom* `.babelrc` *file, you need to add* `next/babel` *as a preset.*

## Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

**▲  Deploy**

## How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-custom-babel-config with-custom-babel-config-app
# or
yarn create next-app --example with-custom-babel-config with-custom-babel-config-app
# or
pnpm create next-app -- --example with-custom-babel-config with-custom-babel-config-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
