Change Log

See the [Gatsby CHANGELOG.md](#)

Gatsby is distributed as a [monorepo](#) using [lerna](#). Several other large open-source projects are distributed this way, including [babel](#), [react](#), etc.

This means that our CHANGELOG.md files are distributed alongside the package itself in the `packages` directory.

For example, the package `gatsby` has a CHANGELOG.md in `packages/gatsby/CHANGELOG.md` . If you'd like to check out others, check out the `packages` directory in the root of the repo.
