apiextensions-apiserver

Implements: https://github.com/kubernetes/community/blob/master/contributors/design-proposals/api-machinery/thirdpartyresources.md

It provides an API for registering `CustomResourceDefinitions`.

Purpose

This API server provides the implementation for `CustomResourceDefinitions` which is included as delegate server inside of `kube-apiserver`.

Compatibility

HEAD of this repo will match HEAD of k8s.io/apiserver, k8s.io/apimachinery, and k8s.io/client-go.

Where does it come from?

`apiextensions-apiserver` is synced from https://github.com/kubernetes/kubernetes/blob/master/staging/src/k8s.io/apiextensions-apiserver. Code changes are made in that location, merged into `k8s.io/kubernetes` and later synced here.
