Developer Preview (Monaco)

Developer preview is based on Microsofts Monaco Editor which is maintained by the Visual Studio Code team.

Update monaco editor

1. Download Monaco editor with npm: `npm i monaco-editor`.
2. Delete everything except the `min` folder (the minimised code).
3. Copy the `min` folder inside the `monacoSRC` folder.
4. Generate the JSON file (see section below)

monaco_languages.json

`monaco_languages.json` contains all extensions and Id's for the supported languages of Monaco. The `FileHandler` class and the installer are using this file.

Generate monaco_languages.json file

After you updated monaco editor or adding a new language you should update the `monaco_languages.json` file.

1. Build monaco in debug mode.
2. Open generateLanguagesJson.html in a browser.
3. Replace the old JSON file.
