# httptester

**Topics**

## Overview

`httptester` is a docker container used to host certain resources required by :ref:`testing_integration`. This is to avoid CI tests requiring external resources (such as git or package repos) which, if temporarily unavailable, would cause tests to fail.

> **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\dev_guide\[ansible-devel][docs][docsite][rst][dev_guide]testing_httptester.rst`, **line 12);** *backlink*

HTTP Testing endpoint which provides the following capabilities:

- httpbin
- nginx
- SSL
- SNI
- Negotiate Authentication

Source files can be found in the http-test-container repository.

## Extending httptester

If you have sometime to improve `httptester` please add a comment on the Testing Working Group Agenda to avoid duplicated effort.
