Select

Contents

Default

Custom `<select>` menus need only a custom class, `.form-select` to trigger the custom styles. Custom styles are limited to the `<select>`'s initial appearance and cannot modify the `<option>`s due to browser limitations.

{{< example >}} Open this select menu One Two Three {{< /example >}}

Sizing

You may also choose from small and large custom selects to match our similarly sized text inputs.

{{< example >}} Open this select menu One Two Three

Open this select menu One Two Three {{< /example >}}

The `multiple` attribute is also supported:

{{< example >}} Open this select menu One Two Three {{< /example >}}

As is the `size` attribute:

{{< example >}} Open this select menu One Two Three {{< /example >}}

Disabled

Add the `disabled` boolean attribute on a select to give it a grayed out appearance and remove pointer events.

{{< example >}} Open this select menu One Two Three {{< /example >}}
