Hello World example

This example shows the most basic idea behind Next. We have 2 pages: `pages/index.js` and `pages/about.js` . The former responds to `/` requests and the latter to `/about` . Using `next/link` you can add hyperlinks between them with universal routing capabilities. The `day` directory shows that you can have subdirectories.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

▲ Deploy

How to use

Execute [`create-next-app`](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example hello-world hello-world-app
# or
yarn create next-app --example hello-world hello-world-app
# or
pnpm create next-app -- --example hello-world hello-world-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
