No Document Import in Page

Why This Error Occurred

`next/document` was imported in a page outside of `pages/_document.js` (or `pages/_document.tsx` if you are using TypeScript). This can cause unexpected issues in your application.

Possible Ways to Fix It

Only import and use `next/document` within `pages/_document.js` (or `pages/_document.tsx`) to override the default `Document` component:

```js
// pages/_document.js
import Document, { Html, Head, Main, NextScript } from 'next/document'

class MyDocument extends Document {
  //...
}

export default MyDocument
```
