Invalid Redirect getStaticProps/getServerSideProps

Why This Error Occurred   The `redirect` value returned from your `getStaticProps` or `getServerSideProps` function had invalid values.

Possible Ways to Fix It   Make sure you return the proper values for the `redirect` value.

```javascript
export const getStaticProps = ({ params }) => {
  if (params.slug === 'deleted-post') {
    return {
      redirect: {
        permanent: true, // or false
        destination: '/some-location',
      },
    }
  }

  return {
    props: {
      // data
    },
  }
}
```
