# How to install the vmware_rest collection

## Requirements

The collection depends on:

- Ansible >=2.9.10 or greater
- Python 3.6 or greater

## aiohttp

aiohttp is the only dependency of the collection. You can install it with `pip` if you use a virtualenv to run Ansible.

```
$ pip install aiohttp
```

Or using an RPM.

```
$ sudo dnf install python3-aiohttp
```

## Installation

The best option to install the collection is to use the `ansible-galaxy` command:

```
$ ansible-galaxy collection install vmware.vmware_rest
```
