Forbid DOM lookup in template creation callback (no-dom-lookup-on-created)

When the `onCreated` lifecycle callback is called, the template does not yet exist in the DOM. Trying to access its elements is most likely an error.

Rule Details

This rule aims to prevent accessing a templates elements before they are attached to the DOM.

The following patterns are considered warnings:

```
Template.foo.onCreated(function () {
  $('.bar').focus()
})

Template.foo.onCreated(function () {
  Template.instance().$('.bar').focus()
})
```

The following patterns are not warnings:

```
Template.foo.onCreated(function () {
  console.log('hello')
})

Template.foo.onRendered(function () {
  $('.bar').focus()
  Template.instance().$('.bar').focus()
})

// should be a warning, but is too hard to check for statically,
// so the rule ignores it
Template.foo.onCreated(function () {
  this.$('.bar').focus()
})
```

Limitations

The rule can not warn when jQuery is invoked through the context.
