pyenv

This plugin looks for pyenv, a Simple Python version management system, and loads it if it's found. It also loads pyenv-virtualenv, a pyenv plugin to manage virtualenv, if it's found.

To use it, add `pyenv` to the plugins array in your zshrc file:

```
plugins=(... pyenv)
```

Settings

- `ZSH_PYENV_QUIET`: if set to `true`, the plugin will not print any messages if it finds that `pyenv` is not properly configured.

- `ZSH_PYENV_VIRTUALENV`: if set to `false`, the plugin will not load pyenv-virtualenv when it finds it.

Functions

- `pyenv_prompt_info`: displays the Python version in use by pyenv; or the global Python version, if pyenv wasn't found.
