Class: TouchBarColorPicker

Create a color picker in the touch bar for native macOS applications

Process: Main *This class is not exported from the* `'electron'` *module. It is only available as a return value of other methods in the Electron API.*

new TouchBarColorPicker(options)

- `options` Object
    - `availableColors` string[] (optional) - Array of hex color strings to appear as possible colors to select.
    - `selectedColor` string (optional) - The selected hex color in the picker, i.e `#ABCDEF`.
    - `change` Function (optional) - Function to call when a color is selected.
        * `color` string - The color that the user selected from the picker.

Instance Properties

The following properties are available on instances of `TouchBarColorPicker`:

touchBarColorPicker.availableColors A `string[]` array representing the color picker's available colors to select. Changing this value immediately updates the color picker in the touch bar.

touchBarColorPicker.selectedColor A `string` hex code representing the color picker's currently selected color. Changing this value immediately updates the color picker in the touch bar.
