Sprunge plugin

This plugin uploads data and fetch URL from the pastebin http://sprunge.us

To enable it, add 'sprunge' to your plugins:

```
plugins=(... sprunge)
```

Usage

Command	Description
sprunge filename.txt	Uploads filename.txt
sprunge "this is a string"	Uploads plain text
sprunge < filename.txt	Redirects filename.txt content to sprunge
echo data | sprunge	Any piped data will be uploaded

Once sprunge has processed the input it will give you a unique HTTP address:

```
$ sprunge "hello"
http://sprunge.us/XxjnKz
```

Notes

- Sprunge accepts piped data, stdin redirection, text strings as input or filenames. Only one of these can be used at a time.
- Argument precedence goes as follows: stdin > piped input > text strings.
- If a filename is misspelled or doesn't have the necessary path description, it will NOT generate an error, but instead treat it as a text string.
