z - jump around

This plugin defines the z command that tracks your most visited directories and allows you to access them with very few keystrokes.

Example

Assume that you have previously visited directory `~/.oh-my-zsh/plugins`. From any folder in your command line, you can quickly access it by using a regex match to this folder:

```
/usr/bin$ z plug   # Even 'z p' might suffice
~/.oh-my-zsh/plugins$
```

Setup

To enable z, add `z` to your `plugins` array in your zshrc file:

```
plugins=(... z)
```

Further reading

For advanced usage and details of z, see README (in man page format, copied from rupa/z).
