gatsby-plugin-lodash

Adds the Lodash webpack & Babel plugins for easy modular, small Lodash builds.

Install

```
npm install gatsby-plugin-lodash lodash
```

How to use

Add the plugin to your `gatsby-config.js`.

```
plugins: [`gatsby-plugin-lodash`]
```

By default this plugin enables all [feature sets](#). If you know you don't need some of them, you can remove support for features sets by setting a `disabledFeatures` option like the following:

```
plugins: [
  {
    resolve: `gatsby-plugin-lodash`,
    options: {
      disabledFeatures: [`shorthands`, `cloning`],
    },
  },
]
```
