Meteor version relationship

NPM Package	Meteor Official Release
2.7.2	2.7.1
2.7.1	2.7
2.7.0	2.7
2.6.2	2.6.1
2.6.1	2.6
2.6.0	2.6
2.5.7	2.5.6
2.5.6	2.5.5
2.5.5	2.5.4
2.5.4	2.5.3
2.5.3	2.5.2
2.5.2	2.5.1
2.5.1	2.5.1
2.5.0	2.5
2.4.1	2.4
2.4.0	2.4
2.3.7	2.3.6
2.3.6	2.3.5
2.3.5	2.3.5
2.3.4	2.3.4
2.3.3	2.3.2
2.3.2	2.3.1
2.3.1	2.2.1

Important note

This npm package is not Meteor itself, this npm package is just an installer. You should not include it as a dependency in your project. If you do your deploy is going to be broken.

Path management

By default, the Meteor installer adds its install path (by default, `~/.meteor/`) to your PATH by updating either your `.bashrc` , `.bash_profile` , or `.zshrc` as appropriate. To disable this behavior, install Meteor by running:

```
npm install -g meteor --ignore-meteor-setup-exec-path
```

(or by setting the environment variable `npm_config_ignore_meteor_setup_exec_path=true`)
