Dynamic Routing example

This example shows how to do [dynamic routing](#) in Next.js. It contains two dynamic routes:

1. `pages/post/[id]/index.js`
   - e.g. matches `/post/my-example` (`/post/:id`)
2. `pages/post/[id]/[comment].js`
   - e.g. matches `/post/my-example/a-comment` (`/post/:id/:comment`)

These routes are automatically matched by the server. You can use `next/link` as displayed in this example to route to these pages client side.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

▲ Deploy

How to use

Execute [`create-next-app`](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example dynamic-routing dynamic-routing-app
# or
yarn create next-app --example dynamic-routing dynamic-routing-app
# or
pnpm create next-app -- --example dynamic-routing dynamic-routing-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
