next/image Un-configured Host

Why This Error Occurred

On one of your pages that leverages the `next/image` component, you passed a `src` value that uses a hostname in the URL that isn't defined in the `images.domains` config in `next.config.js`.

Possible Ways to Fix It

Add the hostname of your URL to the `images.domains` config in `next.config.js`:

```js
// next.config.js
module.exports = {
  images: {
    domains: ['assets.example.com'],
  },
}
```
