BrowserFetcher.canDownload() method

Initiates a HEAD request to check if the revision is available.

Signature:

```
canDownload(revision: string): Promise<boolean>;
```

Parameters

Parameter	Type	Description
revision	string	The revision to check availability for.

Returns:

Promise<boolean>

A promise that resolves to `true` if the revision could be downloaded from the host.

Remarks

This method is affected by the current `product` .
