npm-shrinkwrap

Synopsis

`npm shrinkwrap`

Note: This command is unaware of workspaces.

Description

This command repurposes `package-lock.json` into a publishable `npm-shrinkwrap.json`
or simply creates a new one. The file created and updated by this command will
then take precedence over any other existing or future `package-lock.json` files.
For a detailed explanation of the design and purpose of package locks in npm,
see package-lock-json.
