WARNING: Do not add tests in this directory

There are two types of end-to-end tests in Kubernetes: * Cluster end-to-end tests * Node end-to-end tests

Tests located in `${KUBE_ROOT}/test/e2e/common` are shared by both Cluster and Node E2E test jobs. Tests in `${KUBE_ROOT}/test/e2e_node` are exclusively owned by Node E2E. *If you want to add a test, most likely than not, you want to add the test to one of the two directories mentioned above.* If you are unsure, please check with the OWNER of the directory. This directory currently contains misplaced and legacy tests; they will be cleaned up in the future.
