Colemak plugin
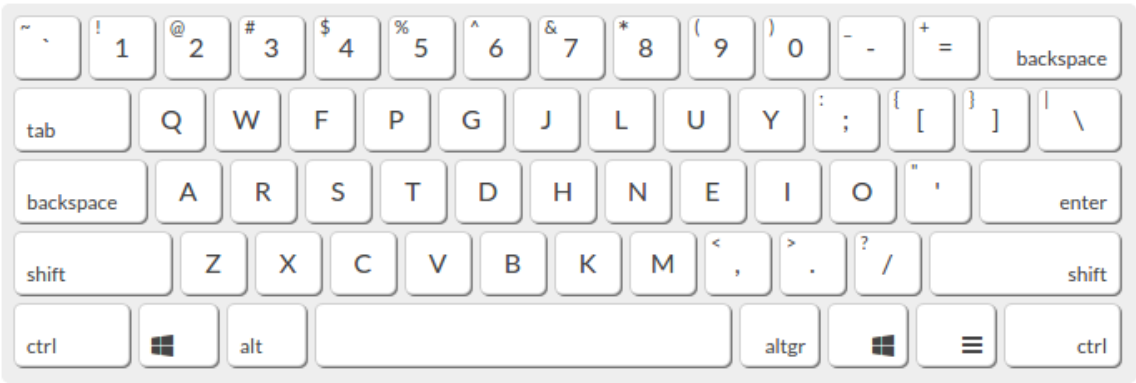

This plugin remaps keys in `zsh` 's `vi` -style navigation mode for a Colemak keyboard layout, to match the QWERTY position:

To use it, add it to the plugins array in your `~/.zshrc` file:

```
plugins=(... colemak)
```

You will also need to enable `vi` mode, so add another line to `~/.zshrc` :

```
bindkey -v
```

Restart your shell and hit the `<ESC>` key to activate `vicmd` (navigation) mode, and start navigating `zsh` with your new keybindings!

Key bindings for vicmd

Old	New	Binding	Description
