gatsby-plugin-preact

Provides drop-in support for replacing React with [Preact](#).

While Preact doesn't provide full support for the React ecosystem, it is an intriguing option for Gatsby sites as it saves ~30kb of JavaScript vs. using React.

> **Note:** This plugin uses Preact X, any version prior to `v10.0.0` is incompatible with Gatsby v2.

Install

```
npm install gatsby-plugin-preact preact preact-render-to-string
```

How to use

```
// In your gatsby-config.js
plugins: [`gatsby-plugin-preact`]
```
