Vertical rule

Contents

How it works

Vertical rules are inspired by the `<hr>` element, allowing you to create vertical dividers in common layouts. They're styled just like `<hr>` elements:

- They're `1px` wide
- They have `min-height` of `1em`
- Their color is set via `currentColor` and `opacity`

Customize them with additional styles as needed.

Example

{{< example >}}

{{< /example >}}

Vertical rules scale their height in flex layouts:

{{< example >}}

{{< /example >}}

With stacks

They can also be used in [stacks]({{< docsref "/helpers/stacks" >}}):

{{< example >}}

First item

Second item

Third item
