Custom JS transitions

While you should generally use CSS for transitions as much as possible, there are some effects that can't be achieved without JavaScript, such as a typewriter effect:

```js
function typewriter(node, { speed = 1 }) {
    const valid = (
        node.childNodes.length === 1 &&
        node.childNodes[0].nodeType === Node.TEXT_NODE
    );

    if (!valid) {
        throw new Error(`This transition only works on elements with a single text node chil
    }

    const text = node.textContent;
    const duration = text.length / (speed * 0.01);

    return {
        duration,
        tick: t => {
            const i = Math.trunc(text.length * t);
            node.textContent = text.slice(0, i);
        }
    };
}
```
