npm-whoami

Synopsis

```
npm whoami
```

Note: This command is unaware of workspaces.

Description

Display the npm username of the currently logged-in user.

If logged into a registry that provides token-based authentication, then connect to the `/-/whoami` registry endpoint to find the username associated with the token, and print to standard output.

If logged into a registry that uses Basic Auth, then simply print the `username` portion of the authentication string.

Configuration

`registry`

- Default: "https://registry.npmjs.org/"
- Type: URL

The base URL of the npm registry.
