Gatsby offers support for the standard Javascript toolchain.

Typescript

Gatsby supports [Typescript](#) automatically, with the [ability to modify the default configuration](#) if desired.

Bundling and transpilation

Gatsby uses [webpack](#) to bundle files and [Babel](#) to transpile Javascript.

- [How to configure webpack](#)
- [How to configure Babel](#)

Most sites work great with the default configuration. Many common changes have [Gatsby plugins](#) already which you can install in your `gatsby-config.js`.

Linting and auto-formatting

Gatsby supports the use of [ESLint](#) and [Prettier](#) to enforce code styling standards.
